

BR-B160-02-C

SPLITTABLE TOW-BAR H160

DESCRIPTION

The Tow-Bar is a rigid stowage device that attaches to the nose gear and tractor to move the helicopter from point A to point B.

The peculiarity of this version is that it can be disassembled into two overlapping parts to obtain a compact set. This removable Tow-Bar configuration allows it to be transported in the cargo compartment

Installation feasible by an operator on flat ground and with good weather conditions. 2 operators are needed for an installation in bad weather or inclined ground. The 2nd operator should be used to guide the operator installing the bar.

*Additional spare parts **FUSE-SET-160** (kit of 10 torsions and 10 tractions) can be purchased if necessary.*

KEY FEATURES

Weight of the tow bar : 41.5 kg

Dimensions : 2271 x 400 x 600 mm

Maximum load in traction : 1720 daN

Maximum load during turn : 1865 Nm

APPLICABILITY

H160
